

Small Animal Services

Sterilization Surgery

We are committed to controlling the area's burgeoning dog and cat population, so our spay and neuter surgeries are a top priority. For more detailed information, contact the veterinarian.

Surgeries are performed Monday - Thursday by appointment. Please call a few days prior to when you would like the surgery scheduled. We require that your pet be vaccinated prior to surgery or at the time of hospitalization.

Specific instructions will be provided to you when you schedule the surgery. We offer all surgical and dental patients pre-surgical bloodwork to ensure their safety while under anesthesia.

Dental Care

Regular, professional teeth and gum cleaning is essential to maintaining your pet's health. Infections in the mouth can easily spread through the entire body via the bloodstream.

Immunization and Wellness Care

Preventative care is rewarding and essential to both animals and owners. We recommend annual physical exams and more frequent exams for pets older than seven.

We also recommend intestinal parasite and heartworm testing, in addition to heartworm prevention. Other steps toward wellness include flea control, vaccinations and dental care, in addition to nutritional counseling.

Microchipping

Collars and tags may not be as reliable as own-

ers think, however, microchipping provides a permanent means of identification. A microchip includes a number, info about the owner and pet, and is added to a national pet registry. It is a simple injection given on the back of the neck, and can be read easily at any vet clinic that has a microchip scanner.

House calls

Dr. Holmstrom will make house calls for large- and-farm-animal patients, and for special-needs cats and dogs, including those who don't travel well, or whose owners have trouble transporting them.

Emergency Services

Emergency services are provided during and occasionally after office hours. If you have an emergency situation, call our number, 512-759-1048. After-hours calls forward to Dr. Holmstrom's pager. Do not wait for the clinic to open in the event of an emergency.
